Status widget for Flight Modes

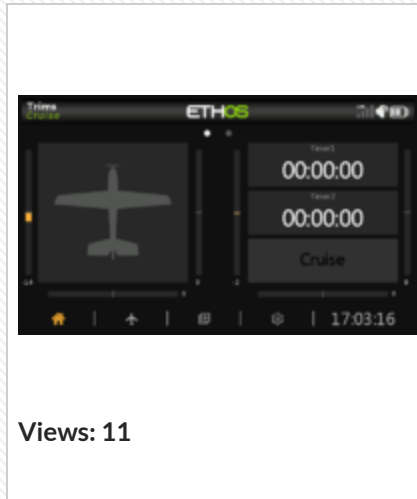

Here is my Status widget for showing the status of up to 8 flight modes.

The flight mode names configured in Flight Modes will be displayed. You can select the font size to be used, and customise the background colour for each flight mode. For example, you might use green for the flight mode you launch or take off in. You might use red for a flight mode you don't want to fly in such as CAL. I have defaulted to grey colours as a starting point.

Just copy the unzipped 'statusFM' folder to the 'scripts' folder on your SD card or eMMC, then reboot your radio. The widget will appear as 'Lua Flight Mode'. Then check how your colours should be assigned, and the text size.
